- We recommend using products from same batch to avoid color variations
- This brochure is for presentation purposes only. Actual colors may differ.

REASONS FOR AIR BUBBLE FORMATIONS ON ACRYLIC SHEETS

Acrylic are bonded in extremely humid conditions

Use of water base synthetic resin adhesive any other than PEVA (Polyethylene Vinyl Acetate Co-polymer)

When substrate loses moisture after installation

Debonding in certain areas because of uneven substrate surface

Insufficient or lack of pressing during the bonding period of laminate

Use of extremely large acrylic/PVC laminate sheets (more than 8 ft x 2 ft long)

To avoid de lamination / air bubbles in between ply and laminate the above steps should be taken care of.
Bonding of acrylic sheets shouldn't be completed under high humidity

DISCLAIMER

- Do not use plywood with high moisture content
- Do not use ply with uneven surface
- Avoid using inferior quality adhesive
- Apply sufficient pressure
- We do not recommend pasting of sheets on the printed/branding area of the plywood
